DAA EXPERIMENT 1

Palindrome Strings in an Array

Aim

To find palindrome strings present in an array using Python.

Algorithm

1. Start.
2. Read the number of strings and store them in an array.
3. Traverse each string in the array.
4. Compare each string with its reverse.
5. If both are equal, display the string.
6. Stop.

Program

```
# Find palindrome strings in an array

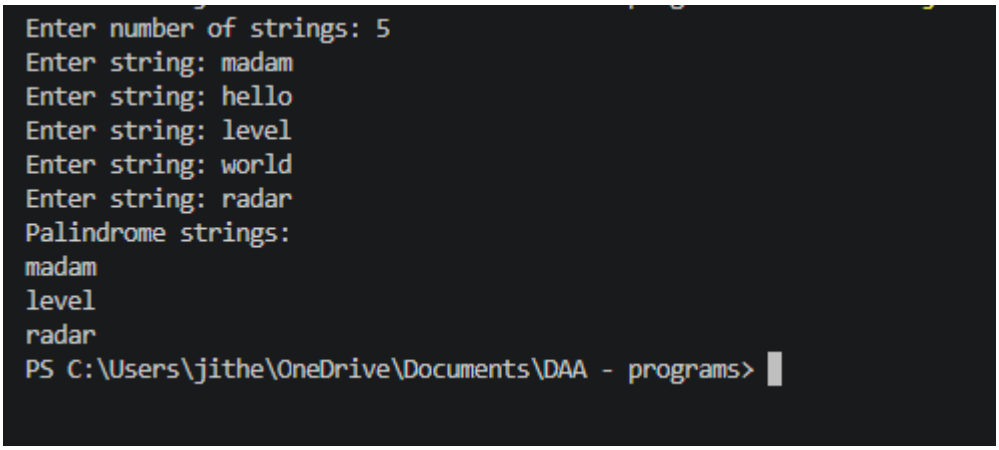

n = int(input("Enter number of strings: "))
arr = []

for i in range(n):
    arr.append(input("Enter string: "))

print("Palindrome strings:")

for word in arr:
    if word == word[::-1]:
        print(word)
```

Output

Result

Thus, the palindrome strings in an array were successfully found.
